

FLEXBOX

[Tessa Joseph-Nicholas](#)

COMP 126: Practical Web Design &
Development for Everyone

BASIC UNITS: FLEX-CONTAINER, FLEX-ITEM, FLEX-DIRECTION

1. TURN A CONTAINER INTO A FLEX CONTAINER WITH THE DISPLAY PROPERTY

```
.container {  
  display: flex; /* or inline-flex */  
}
```

2. PUT CHILD ELEMENTS IN THAT CONTAINER

```
<div class="container">  
  <div class="item1">item one</div>  
  <div class="item1">item two</div>  
  <div class="item1">item three</div>  
</div>
```

NOW THE CHILD ELEMENTS
ARE FLEX-ITEMS AND
READY FOR FLEXBOX!

WITHOUT FLEXBOX

[//codepen.io/tkjin/embed/MPOBjE/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/MPOBjE/?height=265&theme-id=0&default-tab=css,result)

DISPLAY: FLEX; DEFAULT BEHAVIOR

[//codepen.io/tkjin/embed/LqXgOr/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/LqXgOr/?height=265&theme-id=0&default-tab=css,result)

DISPLAY: INLINE-FLEX MAKES THE FLEX CONTAINER BEHAVE LIKE AN INLINE ELEMENT

[//codepen.io/tkjin/embed/LgOBza/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/LgOBza/?height=265&theme-id=0&default-tab=css,result)

FLEX PROPERTIES FOR FLEX-CONTAINER (CONTAINER ELEMENT)

These properties can only be applied to a *container* element to which you've applied `display: flex;` or `display: inline-flex;`

- `display` (flex or inline-flex)
- `flex-direction` (sets main axis)
- `flex-wrap` (do items wrap from line to line inside container or just shrink/expand?)
- `flex-flow` (shorthand for `flex-direction` and `flex-wrap`)
- `justify-content` (aligns items along main axis)
- `align-items` (aligns items along cross axis)
- `align-content` (aligns multiple lines of items along cross axis)
- `gap`, `row-gap`, `column-gap` (adds gaps between flex items)

FLEX-DIRECTION: THE DIRECTION OF FLEX-ITEMS WITHIN A FLEX-CONTAINER; SETS THE MAIN AXIS

By default, X (horizontal) is the main axis and Y (vertical) is the cross axis, but you can change this

<https://codepen.io/tkjin/embed/mdwaymq?default-tab=html%2Cresult>

SO...

MAIN-AXIS VS. CROSS-AXIS

ESTABLISHED BY FLEX-DIRECTION VALUE

FLEX-DIRECTION: ROW; (DEFAULT) = X IS
MAIN, Y IS CROSS

FLEX-DIRECTION: COLUMN; = Y IS MAIN, X IS
CROSS

FLEX-WRAP: WHETHER FLEX-ITEMS WRAP FROM LINE TO LINE IN A FLEX-CONTAINER

<https://codepen.io/tkjin/embed/jOwXEej?default-tab=html%2Cresult>

FLEX-FLOW: DIRECTION/WRAP SHORTHAND SYNTAX

```
flex-flow: row nowrap; (default)
```

```
flex-flow: column wrap;
```

```
flex-flow: column-reverse wrap-  
reverse;
```

```
etc.
```

JUSTIFY-CONTENT: ALIGNS FLEX-ITEMS ALONG THE MAIN AXIS OF THE FLEX-CONTAINER

<https://codepen.io/tkjin/embed/zYzyGrZ?default-tab=html%2Cresult>

Used primarily when the flex-items' sizes are fixed or at their max-height/max-width

ALIGN-ITEMS: ALIGNS FLEX-ITEMS ALONG THE CROSS AXIS

<https://codepen.io/tkjin/embed/BaZvNze?default-tab=html%2Cresult>

`align-items: flex-start;`

`align-items: flex-end;`

`align-items: center;`

`align-items: stretch;`

`align-items: baseline;`

ALIGN-CONTENT: ALIGNS MULTIPLE LINES OF FLEX-ITEMS IN THE CROSS-AXIS

<https://codepen.io/tkjin/embed/eYRbNWv?default-tab=html%2Cresult>

align-content:

flex-start;

align-content:

flex-end;

align-content:

center;

align-content:

space-between;

align-content:

space-around;

align-content:

stretch;

FLEX-ITEM PROPERTIES

NOTE: these properties can only be applied to individual *items* within a flex-container

- **order:** affects the order in which single items appear in a flex container
- **align-self:** overrides the default or assigned (with align-items) alignment for an individual item in a flex container
- **flex-grow:** how much should a flex item grow/what proportion of the available space should it take up, if space is available?
- **flex-shrink:** how much/by what proportion can a flex item shrink if necessary?
- **flex-basis:** default size of a flex item *before* any growing or shrinking or redistribution of available space in a flex container

ORDER

[//codepen.io/tkjin/embed/BqmOWJ/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/BqmOWJ/?height=265&theme-id=0&default-tab=css,result)

ALIGN-SELF: OVERRIDES DEFAULT OR ALIGN-ITEMS ALIGNMENT FOR INDIVIDUAL FLEX-ITEMS

[//codepen.io/tkjin/embed/GYOXxM/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/GYOXxM/?height=265&theme-id=0&default-tab=css,result)

FLEX-GROW: HOW MUCH FLEX ITEMS EXPAND WHEN THERE'S ROOM

[//codepen.io/tkjin/embed/BgmOWJ/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/BgmOWJ/?height=265&theme-id=0&default-tab=css,result)

FLEX-SHRINK: HOW MUCH FLEX ITEMS SHRINK IF CONSTRAINED

[//codepen.io/tkjin/embed/QZaOrp/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/QZaOrp/?height=265&theme-id=0&default-tab=css,result)

FLEX-BASIS: DEFAULT SIZE OF FLEX-ITEMS BEFORE SPACE IS DISTRIBUTED

<https://codepen.io/tkjin/embed/RwgEvYv?default-tab=html%2Cresult>

FLEX: SHORTHAND FOR GROW, SHRINK, BASIS

<https://codepen.io/tkjin/embed/IjJwVKo?default-tab=html%2Cresult>

IN SUMMARY

- Use `display: flex;` to turn a container into a flex-container and its items into flex-items.
- Use `justify-content` to set the main-axis alignment of flex-items.
- Use `align-items` to define the cross-axis alignment of flex-items.
- Use `flex-direction` to switch between columns and rows of flex-items.
- Use the `row-reverse` or `column-reverse` values to flip the flex-items' order.
- Use `order` to customize the order of individual elements.
- Use `align-self` to vertically align individual flex-items.
- Use `flex-grow`, `-shrink`, and `-basis` (or the "flex" property, which is shorthand for those three) to create flexible boxes that can stretch and shrink.

STUFF YOU CAN
DO WITH
FLEXBOX

CENTER ITEMS IN A CONTAINER

[//codepen.io/tkjin/embed/rRNjJP/?height=265&theme-id=0&default-
tab=css,result](https://codepen.io/tkjin/embed/rRNjJP/?height=265&theme-id=0&default-tab=css,result)

DISTRIBUTE ITEMS EQUALLY

[//codepen.io/tkjin/embed/exQPQG/?height=265&theme-id=0&default-
tab=css,result](https://codepen.io/tkjin/embed/exQPQG/?height=265&theme-id=0&default-tab=css,result)

RESPONSIVE NAVIGATION

[//codepen.io/tkjin/embed/PVxyXo/?height=265&theme-id=0&default-
tab=css,result](https://codepen.io/tkjin/embed/PVxyXo/?height=265&theme-id=0&default-tab=css,result)

RESPONSIVE LAYOUT

[//codepen.io/tkjin/embed/WPYaLx/?height=265&theme-id=0&default-tab=css,result](https://codepen.io/tkjin/embed/WPYaLx/?height=265&theme-id=0&default-tab=css,result)
